02 ABBREVIATIONS

Abbreviation	Meaning
ANC	Ante-Natal Clinic
AP	Apheresis Platelets
AS	Additive Suspended
BCR	Buffy Coat Removed
Cryo	Cryoprecipitate
CTP	Consultant Transfusion Physician
DAT	Direct Antiglobulin Test
ETRU	Education, Training and Research Unit
FFP	Fresh Frozen Plasma
Hb	Haemoglobin
HBB	Hospital Blood Bank
Hep	Hepatitis
HIV	Human Immunodeficiency Virus
HLA	Human Leucocyte Antigen
HNA	Human Neutrophil Antigen
MOIC	Medical Officer In-Charge
MP	Malaria Parasites
MSRS	Monthly Statistics Reporting System
NBC	National Blood Center
NBTS	National Blood Transfusion Service
NS	Nursing Sister
PC	Platelet Component
PLT	Platelets
PRPD	PRP Derived
QMU	Quality Management Unit
RCC	Red Cell Concentrate
RDP	Random Donor Platelets
TPE	Therapeutic Plasma Exchange
TPPA	<u>Treponema pallidum</u> Particle Agglutination Assays
TTI	Transfusion Transmitted Infections
VDRL	Venereal Disease Research Laboratory
WHO	World Health Organization

18.1	Yearly Comparison of Immune-Haematology Reference Laboratory Statistics	46
19.1	Statistics on Reagent Preparation - 2024	47
19.2	Yearly Comparison of Statistics on Regent Preparation (on Selected Components)	47
20.1	Statistics on Quality Monitoring of Blood Components and Reagents - 2024	48
20.2	Statistics on Components with Deviated Visual Observation in Quality Testing—2024	48
20.3	Statistics on Special Studies—2024	48
20.4	Statistics on Quality Control Laboratory Performance - 2024	48
20.5	Statistics on Investigations of Quality Related Incidents - 2024	49
20.6	Statistics on Evaluations Done - 2024	49
20.7	Statistics on SL-NEQAS Programmes Conducted - 2024	50
20.8	Statistics on Special Quality Monitoring Tests (HBB Referrals) - 2024	50
20.9	Summary of Tests - 2024	50
21.1	Statistics on the Training Programmes Conducted for NBTS Staff - 2024	51
21.2	Statistics on the Training Programme for Other Staff Categories - 2024	51
21.3	Statistics on the CME Programmes - 2024	52
22.1	Statistics on Stem Cell Transplantation—2024	53
23.1	Statistics of Frozen Red Cell Procedures - 2024	54

04 LIST OF FIGURES

Figure No	Title	Page No
7.1	Distribution of Total Blood Collection by Mode of Collection - 2024	10
7.2	Yearly Comparison of Total Blood Collection	11
7.3	Yearly Comparison of Monthly Blood Collection	12
7.4	Analysis of Monthly Variations in Blood Collection - 2024	13
7.5	Monthly Variation in Number of Mobiles - 2024	13
7.6	Total Blood Collection – Cluster wise 2024	14
7.7	Yearly Comparison of Cluster Collection	15
7.8	Gender Distribution of Blood Donors - 2024	16
7.9	Donor Population According to Number of Donors -2024	16
7.10	Donor Population According to Age Category - 2024	16
7.11	ABO Distribution of Donor Population - 2024	17
7.12	Rh Distribution of Donor Population - 2024	17
8.1	Yearly Comparison of Component Preparation	21
11.1	Yearly Comparison of the Prevalence of TTI Markers	28
11.2	Yearly Comparison of the Prevalence of HIV Markers in Total Collection	29
11.3	Yearly Comparison of the Prevalence of Hepatitis Markers in Total Collection	29
11.4	Yearly Comparison of the Prevalence of VDRL, TPPA and MP in Total Collection	29
12.1	Distribution of RCC Discards in Percentage - 2024	33
12.2	Yearly Comparison of RCC Discards Distribution	33
12.3	Yearly Comparison of Total RCC Discards	33
12.4	Comparison of Monthly Statistics of RCC - 2024	34
13.1	Comparison of Monthly Statistics of PC - 2024	35

05 INTRODUCTION

National Blood Transfusion Service is a special campaign under the Ministry of Health—Sri Lanka. Being the sole supplier of blood and blood products to all government hospitals and a vast majority of private hospitals island-wide, it holds the responsibility of ensuring the quality, safety, adequacy and cost effectiveness of the blood supply and other related services to fulfill national requirement as well as WHO recommendations.

NBTS consists of 109 hospital-based blood banks and 2 stand-alone blood centers affiliated to 24 cluster centers depending on the geographic distribution. Out of the 109 hospital-based blood banks, 104 were functioning in 2024.

The Director—NBTS, is the chief executive officer of the organization, who is responsible for implementation and supervision of the common decisions taken by the organization. Consultant Transfusion physicians provide clinical guidance to the NBTS, through their expertise. Each cluster center is headed by a Consultant Transfusion Physician.

Vision

To be a unique model for the world securing quality assured blood services, through a nationally coordinated system.

Mission

To ensure the quality, safety, adequacy and cost effectiveness of the blood supply and related laboratory, clinical, academic and research services in accordance with national requirements and WHO recommendations.

22 STATISTICS OF STEM CELL TRANSPLANTATION

Haematopoietic stem cell transplantation (HSCT) involves the intravenous infusion of multi-potent haematopoietic stem cells to patients whose bone marrow or immune system is either defective or damaged, aiming to re-establish blood cell production.

Cells for HSCT can be either autologous (from the patient him or herself), allogenic (from a sibling or unrelated donor) or syngeneic (from an identical twin) origin, derived from bone marrow, peripheral blood, umbilical cord blood and fetal liver (rarely).

HSCT procedure can be influenced by cytogenetic abnormalities, response to prior therapy, patient age and performance status, disease status (remission vs relapse), disease-specific prognostic factors and most importantly, availability of a suitable graft source, time of referral, and time to transplant.

It is commonly performed for patients with haematological malignancies such as leukaemia, Hodgkin and Non-Hodgkin lymphoma and multiple myeloma as well as congenital disorders of the blood and bone marrow such as thalassaemia and sickle cell disease.

One advantage of peripheral blood stem cell transplant (PBSCT) is a more rapid engraftment rate than the bone marrow-derived stem cells; where recovery in the PBSCT is around two weeks and the latter one takes around five days more.

Where as, the advantages of cord blood transplant include the rapid collection and administration times, which facilitate treating urgent conditions, less frequent infections, lower rates of GVHD and less need for a stringent identical HLA.

Complications associated with the procedure include mucositis, hemorrhagic cystitis, prolonged and severe pancytopenia, infection, graft-versus-host disease (GVHD) and graft failure.

Bone-marrow cells can be frozen (cryopreserved) for prolonged periods without damaging too many cells, which is a necessity with autologous HSCs because the cells must be harvested from the recipient months in advance of the transplant treatment. But allogenic transplants prefer fresh HSCs to avoid cell loss that might occur during the freezing and thawing process. Allogenic cord blood is stored frozen at a cord blood bank since it is only obtainable at the time of childbirth.

In Sri Lanka, Stem cell transplantations were done only in the National Cancer Institute of Maharakgama (CIM) initially. It was started in the Lady Ridgeway Hospital for Children (LRH) in 2023 and in Jaffna in 2024.

Station	CIM	LRH	TH Jaffna
Number of Patients	42	3	7
Infusion Procedures	44	3	8
Cryopreservation Procedures	34	0	0
Number of Harvests done	45	3	8

Table 22.1: Statistics on Stem Cell Transplantations —2024

23 STATISTICS OF FROZEN RED CELL (FRC)

Red blood cells (RBCs) can be cryo-preserved, i.e. frozen and then thawed to be transfused, with shelf life of 10 years. To prevent the dehydration and mechanical trauma to RBC during freezing, a cryoprotecting agent is used. They are classified as penetrating and non-penetrating agents. Glycerol, a commonly used agent, is a penetrating cryoprotecting agent.

There are two methods in which glycerol are being used for frozen red cell preparation.

1. High Glycerol Concentration (HGC) method

Glycerol is used in 40% weight/volume (W/V) concentration and the frozen red cells are stored at -80 °C

2. Low Glycerol Concentration (LGC) method

Glycerol is used in 20% weight/volume (W/V) concentration and the frozen red cells are stored at -120 °C

This technique is used in many occasions, as

1. Autologous cells are used for anticipated surgery and potential future use, as insurance to minimize use of allogeneic blood.
2. Rare types such as Bombay O can be preserved for future usage.
3. Red cells with improved oxygen transport function are especially useful in coronary artery and cerebro-vascular disease, cardiopulmonary bypass surgery, and hypothermia.
4. Antigenically rare blood can be preserved to be used for patients with rare or multiple antibodies

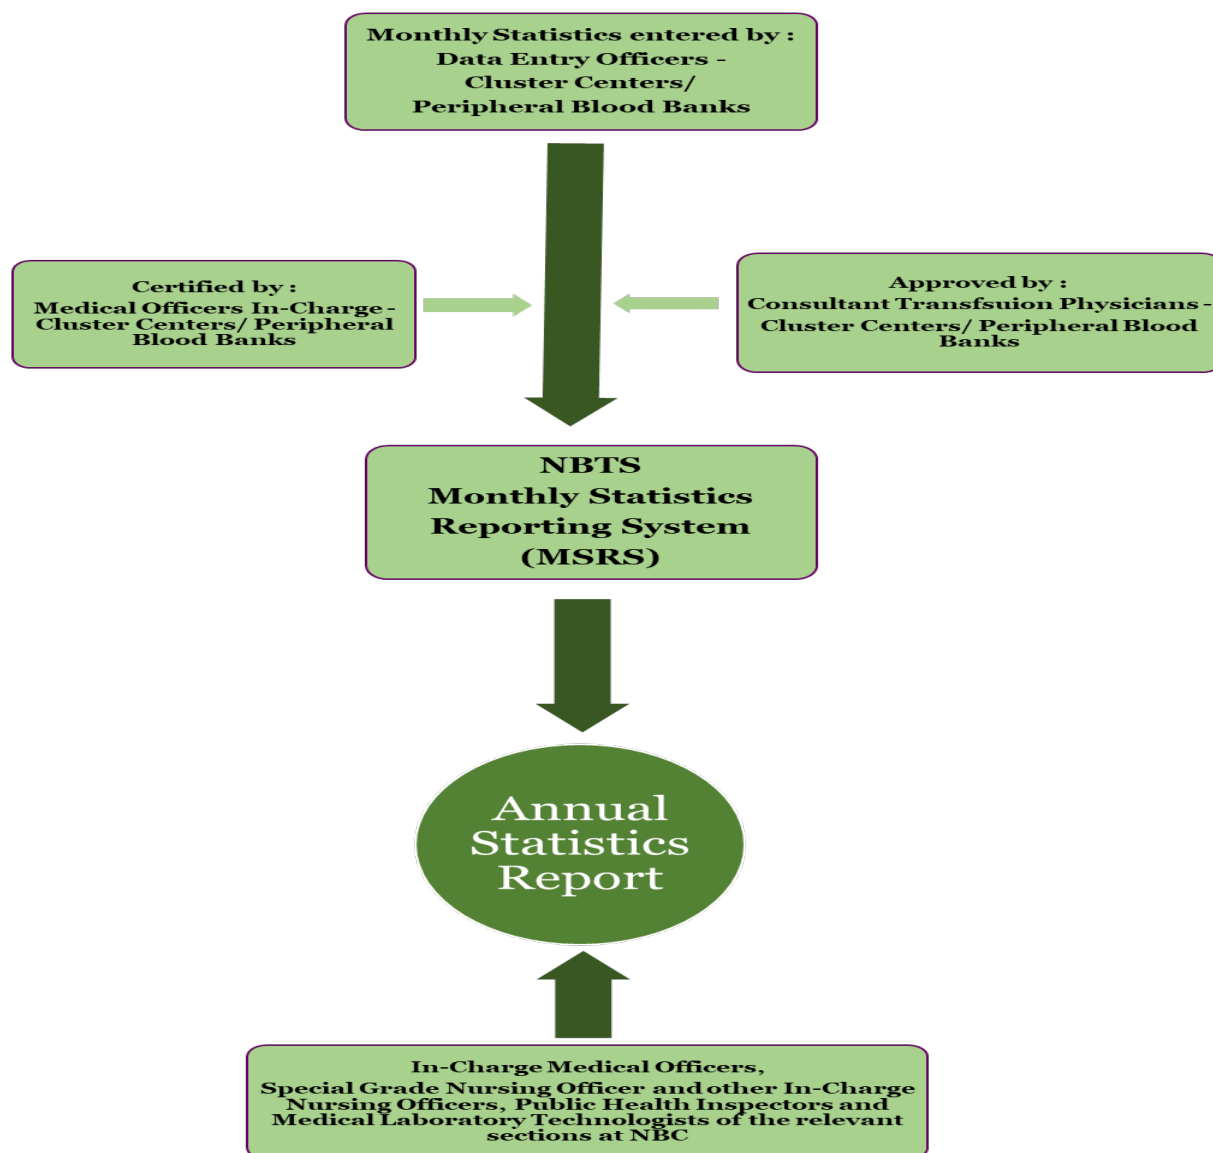

The technique was first demonstrated in 1950, and the National Blood Transfusion Service of Sri Lanka started practicing it since 2015, following several international and local training programmes for the NBTS staff.

NBTS uses this technique to preserve red cells of rare reagent donors, for reagent cell production as well (Table 23.1).

Blood Group	No. of Red Cell Units Frozen	No. of Red Cell Units Deglycerolized	No of Red Cell Units Transfused
Bombay O Rh Positive	2	-	-
Bombay O Rh Negative	1	-	-
A Rh Positive	-	-	-
A Rh negative	-	-	-
B Rh Positive	-	-	-
B Rh Negative	-	-	-
AB Rh Positive	-	-	-
AB Rh Negative	-	-	-
O Rh Positive	-	-	-
O Rh Negative	-	-	-
Total	3	-	-
